

	Chapter 12	Chapter 14	
Attitudes and Perceptions			
Tuning the Environment	Classroom Management: <i>This is one of the biggest portions of teaching. As a student is guided through the learning process, the teacher must ensure that the environment is conducive for all students' to learn at their highest potential. Good classroom management is crucial during all steps of learning.</i>		
Acquiring knowledge			
Creating connections			
Exhibition and evaluation		Measurement and Assessment: <i>Measurement and assessment is incredibly important in the learning process for many reasons. Not only is it important for teachers to create grading purposes, but students and teachers need to have reliable and valid data in order to consistently make interpretation of process and achievement.</i>	
Reflection		Formative and Summative Assessment: <i>Formative and summative assessment can be a great reflection tool for teachers. The results of formative and summative assessments reveal to teachers what information was well received and what information was lost in transfer. If evaluated, this can greatly improve the quality of teaching and ensuring students are reaching all objectives.</i>	
Learning Dissection			
Creative Application			
Making it Last	Self Management: <i>Consistently talking responsibility for one's own actions in crucial in being a self-directed learner.</i>	Norm and Criterion Reference Assessments: <i>The results of both types of assessments can offer a great deal of information to the learner of where there are based on bench marks and where they stand among peers. This can help tremendously in helping students work to their full potential in everything they do.</i>
